

EASEOUT ELECTROLYTIC CELL CLEANER & DESCALER

EASEOUT is an outstanding cleaner and descaler formulated to remove mineral scale buildup from chlorine generating electrolytic cell blades. Regular use maintains chlorine generating cell efficacy to ensure proper pool sanitation.

DIRECTIONS:

Dilute 1 part EASEOUT in 5 parts of water. Always add acid to water and not water to acid. Pour solution into a plastic container slightly larger than the cell. Remove cell and flush it with water to get rid of any residual chlorine or loose soil. Fully submerge cell in EASEOUT and allow it to soak until scale is removed. As mineral scale is dissolved bubbles appear and once bubbles have subsided, descaling is finished. If mineral scale remains on the cell, repeat procedure with fresh EASEOUT solution. Rinse cell thoroughly with fresh water. Allow cell to drain completely before use.
