

H.D TAR & ASPHALT REMOVER

DESCRIPTION: H.D Tar & Asphalt Remover is a clear, semi-viscous powerful degreaser that rapidly penetrates and emulsifies grease, oil, tar and asphalt. H.D Tar & Asphalt Remover is a fully biodegradable methyl ester-based emulsifier which is derived from sustainable vegetable oil origins. It is non-corrosive, non-combustible and unregulated for transport. The semi-viscous nature of H.D Tar & Asphalt Remover allows it to cling to a vertical surface for longer than most degreasers and with less evaporation, increasing dwell time and effectiveness. This low odour degreaser works better than petroleum solvents, Butyl solvents and chlorinated solvents, without their adverse health, safety and environmental challenges.

H.D Tar & Asphalt Remover is ideally suited for heavy industrial applications. It softens and emulsifies hardened tar and asphalt for easy removal. It effectively removes soil, heavy oil and grease.

DIRECTIONS: H.D Tar & Asphalt Remover is designed to be used at full strength. Remove any excess soil before applying product. Apply the H.D Tar & Asphalt Remover liberally to the area being cleaned. For hardened tars and asphalts, allow as much dwell time as possible to soften it without allowing the product to dry. Light scrubbing may be required on heavily soiled areas. Best results are obtained when rinsing with steam or hot water using a power washer.

CAUTION: H.D Tar & Asphalt Remover has excellent solvency. Avoid excessive contact time on plastics, soft rubbers and painted surfaces. Always spot test to ensure compatibility.
