

## SBT – 415 STEAM BOILER TREATMENT

**DESCRIPTION:** A concentrated sodium sulfite solution used as oxygen scavenger in steam boilers. It is a stable solution and being a liquid, there are no dissolving and plugging problems.

**DIRECTIONS:** Estimate the amount of water in the boiler. As a recommended treatment, add 1 part to 3000 parts of water in the system. Enough product should be added to the make up water to provide a constant sulfite reading of 50-100 ppm.

The boiler water should be tested daily. The sample of boiler water to be analysed should be taken prior to blow down. A few gallons should be passed through before taking the sample.

The Canadian Food Inspection Agency has no objection to the use of this product in food plants when used according to label directions.
