

E-Z CLEAN

A highly concentrated alkaline degreaser formulated for circulation cleaning of pumps, piping and sand filters in pools. This product will remove body oils and bacterial biofilms, allowing for efficient descaling in a second step.

DIRECTIONS: Determine the volume of water circulating through piping systems. Use E-Z CLEAN at 1:50 – 1:100. This will give a pH of 12.0 – 12.5 for effective degreasing and sanitizing. Flush system thoroughly before descaling with Excel DC, RELEASE or CLEAN-UP acid descalers.

CAUTION: This is a highly concentrated product containing Caustic Soda. Wear safety glasses and appropriate PPE to avoid skin contact.

FOR COMMERCIAL USE
