

BIO FLOAT

This product is a low odour, fully biodegradable drain and sump sealant. It forms a thick emulsion on the surface of water that stops malodor from penetrating the surface. Bio Float also maintains lift stations by acting as a natural cleaner and degreaser. It also prevents hatching of insect larvae in wet environments.

DIRECTIONS: Pour Bio Float directly into drains, sumps and lift stations until the entire surface appears white in colour. If a drain has dried out, fill it with water before adding Bio Float. Use approximately ½ a gallon for every square foot of surface.
