

CUT LUBE

A water soluble non-hazardous oil to be used in a variety of cutting, forming, tapping, drawing and threading applications. This cutting lube will not promote corrosion or discoloration of the work material. It will provide lubricity and cooling to the tool and work piece. Cut Lube will extend the life of the cutting tool significantly. It will keep machines and machinists clean and reduce maintenance time.

Use of Cut Lube eliminates need for post-machining solvent baths. Wash materials in dilution of 1:30 parts of water.

For tapping, threading, drawing and forming Cut Lube is recommended. Cut Lube is a new development which provides greater lubricity.

Operations	Cut Lube	Water
Forming	1 Part	10 Parts
Deep Drawing	1 Part	10 Parts
Tapping	1 Part	10 Parts
Threading	1 Part	10 Parts

Active rust inhibition when diluted with up to 30 parts of water.

FOR COMMERCIAL USE
