

## COLD TANK DEGREASER

**DESCRIPTION:** A new concept on cold tank cleaners, this product will clean metal sections of carburetor, fuel pumps, pistons, connecting rods, engine and machine parts, etc. It is safe to use on aluminum and other soft metals.

It will remove grease, oil, rust, carbon, paint, soil and varnish without the toxic fumes, evaporation losses and disposal problems which are present in the chlorinated solvent products.

It is no longer necessary to have your shop and everyone associated with it, smell like your cold tank. This product does the job without the toxic fumes and strong odours normally present in cold tank cleaners.

**DIRECTIONS:** Use undiluted at room temperature. Scrape away excess oil and grease deposits from the parts to be cleaned. Put these parts into the tank and completely immerse. Agitation, brushing and heat will speed up the cleaning process. When parts have soaked sufficiently, take them out and rinse with water.

Keep tank covered when not in use.

FOR COMMERCIAL USE
